

AIRBAG SUSPENSION LOAD ASSIST KITS

As seen on over 18,000 Australian Vehicles

Has your vehicle developed a Saggy Rear End when Towing or Loaded for Trips? Then take back control now with a BOSS H.D. LOAD ASSIST KIT !

BOSS air suspension has used its replacement suspension technology to manufacture a range of top selling load assist kits.

This airbag suspension kit gives your vehicle air adjustable rear suspension by using the BOSS airbag and 6mm thick brackets enabling vehicles to carry the load they were intended to.

BOSS load assist kits are easy to fit and most simply bolt on using basic hand tools and when filled with air, raise the rear end (when under load) to make the vehicle level again, making the vehicle safer when loaded by keeping the front wheels in contact with the road, eliminating sway and improving handling and response.

WHAT MAKES OUR PRODUCTS SO GOOD?

LEADER IN AIRBAG SUSPENSION TECHNOLOGY

BOSS Air Suspension is recognised as being the leader in Load Assist (Tow Kits) kits in harsh and rugged environments. From the icy reaches of Europe to the 45+ celsius Degree heat of the Australia Outback. 6mm thick steal stamped brackets, welded then plated and Powdercoated with the BOSS Bold Black Finish. Thus adding durability and style while being very easy to install with simple hand tools.

TESTIMONIALS

This system was fitted on the rear of a Toyota 4wd Hilux (Tacoma) Motorhome. It improved ride and stability, levelling. However most importantly took the jarring out of the corrugated roads, potholes, and rough tracks. We have travelled up Cape York, across central Australia and up to Arnhemland. IAN.

This is my 5th set of Boss Air Bags on my companies vehicles and all have been easy to fit. They have also worked for the life of the ute. The ones just purchased are new Colorado. They replaced an older Rodeo that has 350,000K on the clock and the air bags are still going good! JASON

WHATS INCLUDED?

EACH LOAD ASSIST KIT COMES WITH:

- **BOSS Extreme Series 2500 / 2600 H.D. Double Bellow Airbags Kit**

(Average dual cab Utes will run around 45-55psi)

All BOSS airbags are manufactured by BOSS & are branded BOSS!

Beware of imitations !

INTERESTING FACTS ABOUT OUR AIRBAGS

Time to produce a single bag

It takes over 20 minutes for each bag to go from the raw un-cured blended rubber to a cured air bag.
1 machine can only make 1 bag at a time! A time consuming process!

Quality Control

One bag in every 100pc is pressure tested to destruction within a controlled chamber.

Clamping Pressure

Each air bag machine has over 50 tons of clamping pressure on the mold during curing.

Bag Strength

It's not the thickness of the rubber that gives the bag its strength. But the angle of the reinforcing cords and design of the woven beads.

BOSS Airbag Machinery

Slimline Airbags

BOSS Air Suspension has designed and now manufacturing 4 new compact Air Bags to suit vehicles where there is very limited room to fit our Load Assist Suspension Kits.

This is a breakthrough for those of you who have been ringing over the last few years looking at Air bag kits to suit vehicles with limited height or width. This new exclusive BOSS product opens the door to a whole new solution for customers looking to level out their vehicle.

This new Air bag range is called the 2400 Extreme range and features a smaller diameter Air Bag without compromising load capacity and is still manufactured to our heavy duty specifications.

These bags are available in single bellows for those super tight spaces, double bellows and triple bellows where reach is critical but diameter is tight.

One final major feature; We have designed the 2400 bag to fit our famous 2500 Bracket so they can be retrofitted to existing vehicles with ease.
